# TRAIL FUSION

Seriously fun!

A black and white close-up portrait of a person wearing a dark hood and goggles. The person has a wide-eyed, open-mouthed expression of shock or excitement. The goggles have "FIT" and "VIPER" written on the lenses. The image is framed by a thick black border.

## Incredible grip!

The 8 replaceable pins offer optimal grip and traction whilst ensuring ultimate comfort and ease of use when pedaling. The design of the platform and its reduced profile height (just 18mm) give you the utmost efficiency and confidence as you lean into bends.

The TRAIL FUSION's wide composite platform provides excellent stability and control, even if your foot is not perfectly placed in the center of the pedal. It offers a 25% greater contact area than traditional pedals, immediately giving you more confidence on technical sections and better control through curves.

## Made by LOOK

With **35 years of experience in manufacturing pedals**, we put the TRAIL FUSION through the toughest tests.

Our testing begins in our quality lab, where they passed 15 tests. The Trail Roc Plus **survived hundreds of hours of fatigue tests and resisted the harshest shock tests. We take pride in our products, our standard range of tests are unparalleled and well above the ISO required standards.** This rigorous process has enabled us to build durable and robust pedals.

After the lab we moved into field testing, spanning nearly half a year. Under the feet of our athletes the pedals were, and continue to be pushed through the most demanding competitions.

With a sleek design and 5 colors to choose from, the TRAIL FUSION pedals make matching and styling your kit and bike child's play. Choose your perfect color and enjoy the ride!
